

Adrenatran

What?

Adrenatran is a neurotransmitter precursor supplement containing a specific blend of amino acids, vitamins and minerals designed to support healthy adrenal and neurotransmitter function.

Why?

Neurotransmitters have become a hot topic in the past few years. If you watch television you likely hear about them through medication ads on a daily basis. So, what are they? Neurotransmitters are made from amino acids, vitamins and minerals. Neurotransmitters are the chemical messengers that link the nervous system to the rest of the body. So, it's all about communication!

Neurotransmitter precursor supplements provide the body with the nutrition it needs to make specific neurotransmitters. **Adrenatran** contains a proprietary blend of amino acids formulated to promote catecholamine balance and adrenal health. Catecholamines are mainly found in the body as the neurotransmitters epinephrine, norepinephrine and dopamine. These neurotransmitters work hand-in-hand with the adrenals to regulate our stress response. Most people know very little about the adrenals aside from the fact that they produce adrenalin – but these little powerhouses do so much more! The adrenals, sitting atop the kidneys, play a key role in everything from hormonal balance and stress response to mineral and fluid balance, energy levels and metabolism. Balanced levels of epinephrine, norepinephrine and dopamine can enable the adrenals to function at their optimal level, creating a state of health and balance throughout the body.
